Through a grant from Florida Emergency Services for Children (FLEMSC), the Bonita Springs Fire Control & Rescue District is hosting a unique training opportunity; this class is one of only four offered in the State of Florida. **The Pediatric Procedures & Practice Pig Lab will be held on Thurs. Feb. 26th at Bonita Fire Station #4 located at 27701 Bonita Grande Drive. The media is invited to attend, please arrive anytime from 1:00PM-1:30PM.**

Training and dissections are done on pigs as they are the closest anatomy to children. The training gives attendees a deeper understanding of how to care for pediatric patients.

Please note: The Class is already FULL so this is not an advertisement to boost attendance; we are however inviting our media contacts to cover the story on this innovative training opportunity.

Media contacts will receive a press package on Feb. 26th from FLEMSC, but here is a glimpse: Join international pediatric nurse expert Scott DeBoer as he teams up with the infamous David Seastrom for this one of a kind pediatric learning experience. They will walk attendees through the basics and beyond of pediatric emergency care. Attendees will gain a deeper level of understanding as to why we do what we do in emergency situations with kids. This is your chance to look at pediatric patient care like you've never seen before... from the inside out!
